

**Is there any difference in running the same function of YFCAD software on Win 7 32bit and 64bit?**

**Answer:**

There is no difference in running the same function of YFCAD software on both Win 7 32-bit and 64-bit. Currently, all YFCAD software are originated in 32-bit, and they can only run as compatible mode in 64-bit system.

Moreover, if your YFCAD software needs AutoCAD platform, such as InteriCAD 6000 or 7000, the Win 7 32-bit is more suitable, because Win 7 64-bit will install 64-bit AutoCAD automatically (if your AutoCAD version is 2009 or higher), so user have to use AutoCAD 2008 or below to meet this requirement.
